# Factiods

- Written in Tclhttpd
- Originally targeted MySQL
- Ported to Sqlite in 2008

Taohttpd

# Basics

- Extends Tclhttpd to export object methods as URLs
- Bundles records as “containers”
- Auto-Generates UI elements based on the database schema

# Lessons Learned

- 1: Women over 30 can't seem to remember their birth year

# Lessons Learned

- The folks who print badges will mint 4 duplicates at random for “John Smith”
- While at the same time thing “William Jones” “William Jones, Jr.” and “William Jones III” are all the same person

# Lessons Learned

- Always leave the Gender field nullable
- And editable for that matter...

# Lessons Learned

- Leave a system running long enough, and people will find “new features” all the time.

### Sat, October 25, 2008

We have a small number of tickets available for CHANEL'S MOBILE ART, the exciting installation in Central Park by Pritzker Prize winning architect ZAHA HADID. This spectacular travelling structure has already stopped in Hong Kong and Tokyo and is headed for London, Paris and Moscow. Inside are works by fifteen contemporary artists, each of whom was asked to create a work inspired by CHANEL'S classic 2.55 quilted-chain handbag first issued in 1955.

\$75.00 INCLUDES THE BUS AND THE TICKET.

For more information contact:  
[ellenkay@prodigy.net](mailto:ellenkay@prodigy.net)

# Taohttpd URLs

- Objects register a URL with the `Object_Url` command.
- The object resolves what to do with a URL using an exposed method, `httpdMarshallArguments`

# Object\_Url

- Mimics Tclhttpd's Direct\_Url
- Arguments: virtual object {inThread 0}
- virtual: The URL (eg /home)
- object: The name of an ensemblish object (eg wikiContainer)

# httpdMarshalArguments

- Arguments: suffix cgilist
- suffix: Portion of the domain after the object's url
- cgilist: Any data given in a form or as part of the url
- Returns: 3 element list:
  - command method argdict
